Agriculture Insurance Development Program

CONTEXT AND BACKGROUND

Ministry of Foreign Affairs of the Netherlands

GFDRR

Global Facility for Disaster Reduction and Recovery

CONFIDENTIAL : NOT FOR EXTERNAL DISTRIBUTION

Increasing global focus on agricultural risk management

■ Underlying drivers for interest in agricultural risk management

- Agricultural productivity: major gains area needed to meet population growth
- Climate change : increased yield volatility, extreme events and vulnerability
- Food security and poverty reduction : needs for safety nets and disaster risk reduction

■ The context for agricultural insurance

- Insurance is one part of a larger *risk management strategy and framework*
- Insurance is needed to protect investment into primary production and in agricultural supply chains, and facilitates access to finance
- There are major technical, organisational and financial challenges faced in *scaling up* agricultural insurance in developing countries. e.g.
 - Small farm size, low financial literacy and low insurance awareness
 - Lack of rural extension services, poor access to finance, access to inputs, access to markets,
 - Limited capacity of insurers especially in rural areas
 - Limited or poor quality data

Ministry of Foreign Affairs of the Netherlands

GFDRR
Global Facility for Disaster Reduction and Recovery

Lessons learned in developing countries

- **Agricultural insurance needs to fit national and local needs**
 - Experience shows that agricultural insurance needs to be *linked* to other services to provide value to farmers (access to credit, extension, input supply, seeds, markets)
 - Segmenting the client base to meet needs of different sectors
 - Commercial farming (e.g. linked to supply chains and credit)
 - Emergent farming (e.g. linked to development programmes)
 - Subsistence farming (e.g. linked to safety nets)

- **Agricultural risk is complex**
 - Farmers are faced by a range of *risks* and *constraints*
 - Insurance *programs* organise partners and stakeholders
 - Insurance *products* need to be technical but also operationally feasible
 - *Standardisation* is not easy in agricultural insurance
 - Index insurance is difficult to *scale up* beyond pilot phases

Public Private Partnerships: international experience

- **Sustainable agricultural insurance needs to be based on a partnership between public and private sectors**
 - Particularly the case in developing countries
- **Public sector strengths**
 - Provide an enabling environment, government policy, legislation and regulation
 - Data and services,
 - Long term investment in agricultural development programs where insurance sector and credit services can be crowded in
 - Financial strength (subsidies, reinsurance....)
- **Private sector strengths**
 - Market based innovation and dynamism
 - Insurance underwritten and delivered by the private sector through good insurance management principles and practices

THE AIDP PROGRAM

Ministry of Foreign Affairs of the
Netherlands

GFDRR
Global Facility for Disaster Reduction and Recovery

CONFIDENTIAL : NOT FOR EXTERNAL DISTRIBUTION

How can AIDP help governments achieve their objectives?

- ✓ **A:** The AIDP can assist governments in implementing **sustainable, cost-effective public private partnerships** in agricultural insurance
- ✓ **B:** The AIDP **builds on IBRD experience** working with agricultural insurance programs that have **achieved scale** (*India case study*)
- ✓ **C:** The AIDP can assist the governments with enhancing **data market infrastructure** (*examples : satellite remote sensing, mobile phones*)

Global Facility for Disaster Reduction and Recovery

Cost-effective public private partnerships in agricultural insurance

- **Public private partnerships in agricultural insurance can address multiple objectives:**
 - ✓ **Farmers**
 - Reduce **vulnerability & food insecurity** and support livelihoods
 - Support agricultural **productivity** through sustainable **credit markets**
 - ✓ **Government**
 - More **effective** use of government financial support
 - Reduce its **contingent liability** to agricultural shocks
 - Better (ex-ante) **budget planning** and management
 - **Policy signalling** (e.g. crop patterns)
 - ✓ **Banks**
 - Better management of **balance sheet risk**
 - Supports **responsible expansion of ag-credit** to farmers
 - ✓ **Insurers**
 - Provides **scale** to unlock new market & support market investments

Netherlands

GFDRR
Global Facility for Disaster Reduction and Recovery

Case Study: India

WB has assisted the Government of India (GoI) with its agriculture insurance program : about 30 million farmers are now covered

- **Programs features allowing scale up:**
 - Commitment to program over a **long time period** (since 1985)
 - **Compulsory** for borrowing farmers
 - **Subsidies**
 - Linked to actuarial revisions to improve sustainability
 - Coordinated long term **investments in data**
 - Crop cutting experiments (CCE)
 - Weather station infrastructure
 - Remote sensing data
 - **Application of technology** to support insurance operations
 - Remote sensing to complement and target CCE's
 - Mobile phone data infrastructure for rapid reporting of field surveys
- **Substantial involvement of private sector since 2007**
 - ⇒ Currently 29m insured

Ministry of Foreign Affairs of the
Netherlands

GFDRR
Global Facility for Disaster Reduction and Recovery

Case Study: Mexico

WB has assisted the Government of Mexico with a comprehensive analysis of its programs

- **Mexico has achieved a PPP strategy to serve all farming sectors:**
 - Long term commitment of government
 - National System for Insurance of the Rural Sector (SNMAR) involves ministries of agriculture, finance, State Governments, Agroasemex, the regulator, private insurers and Fondos (mutual funds);
 - Closely linked to national agricultural credit system (FIRA) and other providers
 - Outreach and distribution is adapted to farming structure
 - Commercial farming sector is served by insurance companies and Fondos
 - Small farmers are reached by State governments through CADENA
 - Agroasemex also provide strong technical capacity to support the market
 - Market is open to international reinsurance competitively in addition to reinsurance through Agroasemex
 - Innovative use of indexed products for both insurance and reinsurance
 - Premium subsidies
- ⇒ Market premium income \$222million

Case Study: Turkey

- Turkey restructured its market in 2005 to concentrate technical and underwriting resources through the TARSIM pool:

11

Ministry of Foreign Affairs of the Netherlands

GFDRR
Global Facility for Disaster Reduction and Recovery

Case Study: Turkey

- **Features of TARSIM:**
 - Established by law in 2005
 - Standardised products
 - Tariff based on region, policy type and crop
 - Centralised loss adjustment service and training
 - Insurance pool
 - Centralised reinsurance purchase by the pool
 - Collaboration and concentration of expertise from companies
 - Premium subsidies (50% to 66%)
 - Expansion of policy sales from 218,000 to 744,000 (and premium TL 47m to TL 273million)

- **Reform of the market significantly improved the technical standards and outreach of agricultural insurance**

Ministry of Foreign Affairs of the
Netherlands

Some features of PPP's

- **Characteristics of successful PPP's**
 - Successful PPP's extend beyond the provision of premium subsidy
 - PPP's work best where government infrastructure and policy to support agriculture is in place
 - Good definition of role of insurance and disaster management
- **Challenging situations for PPP's**
 - Poor governance or weak economies
 - Poor standards and development of insurance markets
 - Agriculture in very high risk climates
 - Weak innovation within agricultural sector
 - Poorly developed supply chains

Agricultural Insurance Development Program

The World Bank DRFI Program, the World Bank Agricultural Risk Management Team (ARMT), and the Ministry of Foreign Affairs of the Netherlands are advancing a joint program on agricultural insurance in developing countries.

The mission of the Agricultural Insurance Development Program (AIDP) is to support countries in implementing sustainable and cost-effective public private partnerships in agricultural insurance that increase the financial resilience of rural households, as part of their broader agricultural risk management strategy. For additional information, see [AIDP Program Overview](#).

AIDP is part of the broader Swiss-Dutch-World Bank partnership on agricultural risk management. For additional information, see [AIDP Strategy Paper](#) (PDF)

International Congress on Insurance and Reinsurance of Agricultural Risks - Marrakech from January 29th to 31st 2014

The World Bank, through its Agricultural Insurance Development Program (AIDP), The African Insurance Organization, the African Centre for Catastrophe Risks and the Société Centrale de Réassurance are organizing an International Congress on Insurance and Reinsurance of Agricultural Risks in Marrakech from January 29th to 31st 2014. This event constitutes a real strategic opportunity for the industry players, government authorities and insurance and reinsurance players in order to highlight significant risks that threaten the agriculture sector, and discuss this issue in the presence of renowned experts and speakers in the field.

Partnership with the Netherlands Ministry of Foreign Affairs

The Netherlands Ministry of Foreign Affairs is an established leader in promoting sustainable agricultural risk management in developing countries. AIDP is part of a broader Swiss-Dutch-World Bank partnership on agricultural risk management.
